

PROGRAM EVALUATION

After graduation, there is an ongoing relationship with the NSCC Program for most graduates. Many of students will be fieldwork supervisors, class lecturers, and members of the Advisory Council. Students are asked to support the Program by responding to the program evaluation surveys. Your input is invaluable to our Program. **It is important that you notify the Department concerning your change of address while you're a student and also when you are an alumni.**

The Program has a system for ongoing program evaluation. Information obtained from various resources provide both process and outcome information. The data are collected at various times and analyzed as appropriate. All of this data is processed in reference to the Program's theoretical framework and standards. This includes essentials of the profession, philosophy, frame of reference, curriculum design and general objectives of the Program and the mission, policies and procedures of the Institution. The output or plans for change area always influenced by this theoretical framework and standards so that the changes are made in an orderly and effective manner.
