### Working with data elements

The Common Matching Data Dictionary Form (GORCMDD) is delivered with available data elements that may be used for the Common Matching process. You can add data elements as necessary to be used with package procedures developed by your institution.

SunGard Higher Education has delivered a standard set of data elements that you can use with online and batch processing. The data on the Common Matching Data Dictionary Form (GORCMDD) delivered with **System Required** indicator of *Y* cannot be modified or deleted.

Note: End users will most likely never add to this form.

SPRIDEN	SPRIDEN_CHANGE_IND	CHANGE IND	1	☐	☐	☐	☐	☐	21-OCT-2004

Fields

These fields act as indicators to determine how the data elements are implemented when creating the rules for the matching source.

Field	Description
Base Table	Database table associated with the column name and element.
Column	Column name of the element to be used in Common Matching rules.
Element	Element to be used in Common Matching rules.
Maximum Length	Length of the element as it exists in the table.
Length updateable	If checked, indicates that the user can define the number of characters to be used in matching, up to the maximum length specified.
Allow Negative Length	If checked, the negative length will be the number of characters from the end of the field. If not checked, the system will use the first number of characters from the beginning of the field. Example: Using the last four digits of SSN/SIN instead of the entire field.
Online Indicator	If checked, designates the data element is available on the Common Matching Entry Form for use with online matching.
Core Matching Element	The SSN and Last Name/Non-Person Name elements are delivered as Core Matching Elements. No additional elements can be marked as core matching elements. When building Common Matching Rules the SSN and/or the Last Name/Non-Person Name elements must be included in each Rule Set for the algorithm to function properly.
Activity Date	Date the record was created or last changed. Display-only.
